Summary

I am a Software Engineer who began my career in the manufacturing industry, where I developed a strong discipline for quality standards, operational efficiency, and high attention to detail. I successfully translated these core principles into software development through an intensive Full Stack Software Engineering program at RevoU. I specialize in building reliable, maintainable, and user-focused web applications utilizing the JavaScript and TypeScript ecosystem, including React, Next.js, Tailwind CSS, Node.js, NestJS, Prisma, and PostgreSQL. Proficient in using Git, GitHub, Markdown, and Docker for containerization and seamless collaboration, I take full ownership of the development lifecycle—from architectural design to ensuring system scalability and performance. I am currently seeking opportunities to leverage my unique blend of industrial discipline and technical expertise to build impactful digital solutions and drive continuous innovation within a dynamic engineering team.

Education

RevoU

Oct 2025 - May 2026

Full Stack Software Engineering

Developed a comprehensive Point of Sale (POS) and inventory management system featuring a multi-tenant architecture capable of serving multiple business entities simultaneously on a single platform. Built the full-stack application using **JavaScript**, **TypeScript**, **React**, **Next.js 16**, **Node.js**, **NestJS**, **Tailwind CSS**, **Prisma**, and **PostgreSQL**. Utilized **Docker** for containerization, **Markdown** for documentation, and **Git/GitHub** for version control and collaborative development workflow.

SMK Kesuma.

Jul 2021 - May 2024

Vocational High School, Computer and Network Engineering (TKJ)

Working Experiences

Operator Produksi | PT 2 Kelinci

May 2024 - Feb 2025

- Executed daily production processes in strict accordance with company quality standards, ensuring each stage was well-organized to minimize product defects to **under 2%**.
- Thrived in a target-driven environment, maintaining a steady workflow and high efficiency to consistently achieve **100% of daily production quotas** without compromising quality.
- Coordinated closely with team members on the production line to quickly resolve operational bottlenecks, preventing prolonged downtime and maintaining **over 95% line efficiency**.
- Developed strong discipline and high attention to detail through strict SOP compliance, which now serves as a solid foundation for writing clean and accurate code.

Teknisi Komputer | Teha Comp Kudus

Jan 2023 - Jul 2023

- Handled the assembly, repair, and routine maintenance of computer hardware, ensuring optimal performance for clients' PCs and systems.
- Performed operating system and software installations, tailoring system configurations to meet the specific needs of individual users.
- Conducted step-by-step, systematic troubleshooting to accurately diagnose hardware malfunctions and software errors.
- Communicated directly with customers to understand their technical issues, providing the most efficient and effective repair solutions.

Project Experiences

Inventory Managment System | RevoU

Engineered a full-stack, multi-tenant inventory and Point of Sale (POS) application with secure Row-Level Isolation using Next.js 16, TypeScript, NestJS, and PostgreSQL. Developed Role-Based Dashboards via Edge Middleware and managed state using Zustand and TanStack React Query. Implemented robust end-to-end security, including JWT via HttpOnly Cookies, CSRF protection, and Idempotency Keys to prevent duplicate transactions. Integrated a Python FastAPI AI ecosystem for a virtual assistant and automated product extraction from images. Ensured production-grade reliability with >88% frontend test coverage using Vitest and 260 backend automated tests using Jest, alongside a structured Audit Logging system and real-time auto stock reversal logic for returns and cancellations. Link Demo: [INVENTORY MANAGMENT SYSTEM](#)

Bank System | Revou

Designed and built a comprehensive digital banking API employing a modular architecture using TypeScript, NestJS, Prisma ORM, and PostgreSQL. Developed secure transaction processing for deposits, withdrawals, and transfers featuring decimal precision, pagination, and Idempotency Keys. Implemented multi-layered security measures including JWT with refresh tokens, Role-Based Access Control (RBAC), bcrypt hashing, and rate limiting. Built robust administration features incorporating structured Audit Logging via Winston, caching for performance optimization, and system health checks. Delivered interactive API documentation via Swagger/OpenAPI 3.0, validated reliability through Jest testing, and containerized the application using Docker for seamless CI/CD deployment to Railway. Additional Information

- **Languages:** JavaScript, TypeScript, Golang, HTML/CSS.
- **Frontend Development:** React.js, Next.js, Tailwind CSS.
- **Backend Development:** Node.js, NestJS, PostgreSQL, Prisma ORM, RESTful APIs.
- **Tools & Deployment:** Git, GitHub, Docker, Postman, Railway, Markdown.
- **AI & Engineering Tools:** AI & LLM Integration, AI Agents, OpenCode CLI, Claude Code CLI, MCP.
- **Soft Skills:** Problem-Solving, Attention to Detail, Teamwork, Adaptability, Fast Learner, Effective Communication.
