About Me

I am a software engineer who values ownership, clean code, user empathy, and continuous learning, and I bring these principles to building maintainable, user-focused applications. I have built and deployed various web applications using React, Next.js, and Golang, ranging from management systems to real-time platforms serving hundreds of users. In each project, I take full ownership from architecture design and implementation to deployment, ensuring performance, scalability, and a seamless user experience. My technical expertise includes full-stack development with React, TypeScript, Node.js, and Golang, along with PostgreSQL, Docker, and cloud deployment. With a strong commitment to continuous learning and delivering high-quality results, I am eager to contribute as a Software Engineer in a dynamic and innovative team.
